

Performance Hub — Cursor Implementation Map

Companion to `FutureLink_PerformanceHub_FULL.jsx` (the definitive full prototype).

Sources: Performance Hub Gaps Brief v1.0 · Incentive Spec v1.1 · Offers Scope v2.1 · staff guides · codebase audit (Sprints 0–5 migrations).

How to use: open the prototype in any React sandbox (single file, default export, no props, inline styles — no Tailwind/build config needed). Each screen below maps to a proposed route, the backend that already exists, and what remains to build. Status legend:  backend live (UI work only) ·  partial (wire-up) ·  build.

0. Critical context for Cursor

The codebase is AHEAD of the docs. Sprints 0–5 migrations already implement much of what the gaps brief lists as missing. Before building anything, check

`supabase/migrations/202606*` — these already exist:

- `fn_size_wallet`, `fn_size_wallets_for_period` — auto wallet sizing
- `wallet_multiplier_bands` (seeded 0.5×–1.25×), `wallet_topup_rules`
- `performance_score_weights` (40/20/20/10/10, CHECK sum=100)
- `fn_period_close_and_reseed`, `fn_close_due_wallets` — close + reseed loop
- `fn_apply_offer_discount` — funding-aware debit (university=0, joint=FL%)
- Allocation trigger hard-blocking spend beyond unlocked (unlock gate)
- `fn_wallet_scope_matches` — strategic wallet ring-fencing
- `offer_status` enum + `offer_status_history` + `offer_versions` — lifecycle
- `approved_offer_types`, `funding_source` + `fl_contribution_pct`
- Engine (`supabase/functions/incentive-calculate-run/index.ts`): purpose FX with general fallback, discount penalty tiers (5%→100%, 10%→90%, 15%→75%, >15%→0), campaign overlays, branch contests, `fx_snapshot` freeze at lock.

The single biggest deliverable is the unified UX layer (routes, global period selector, command center, client strip) — almost zero backend work.

Design tokens (used throughout the prototype): ink  `#101A2E` · blue  `#1257D6` · cash-green  `#0E8F62` · wallet-amber  `#C97A06` · offer-coral  `#C0392B` · violet  `#6D4AC9` · Sora (display) + Inter (body). Module color is constant everywhere: green=cash, amber=wallet, coral=offers.

1. Screen → route → backend map

Workspace

Prototype screen	Route	Backend	Status
My performance (Home)	<code>/performance</code>	<code>fn_counselor_period_achievement</code> , <code>discount_wallets</code> , latest run/preview	✅ data; ☐ unified page (replaces MyIncentives.tsx mixing)
Client view — promotions strip + suggestion card + inline apply	client record panel	<code>offers_eligible_for_client()</code> , <code>fn_apply_offer_discount</code> , wallet trigger	🟡 strip/inline; ☐ suggestion card rules-based first
Event timeline (X5)	client record	<code>offer_events</code> , <code>incentive_qualifying_events</code>	🟡 — only <code>payment_verification</code> emits today; add <code>enrolment</code> , <code>stage_change</code> , <code>lead_conversion</code> emitters
Wiring map	<code>/performance/how-it-works</code>	static	☐ optional

Period operations

Screen	Route	Backend
Command center (money rail + 6-step workflow)	<code>/performance/admin</code>	aggregates of qualifying events, allocations, runs, payouts
Unclassified payments queue	<code>/performance/admin/unclassified</code>	payments lacking service lock on count=0

Screen	Route	Backend
Runs (preview→calculate→lock)	<code>/performance/settlement</code>	edge fn <code>incentive-cal</code> <code>run</code>
Run detail: line items + adjustments	same	<code>incentive_run_items</code> <code>incentive_adjustmen</code>
Simulator	<code>/performance/settlement/simulator</code>	preview mode, two period
Competitions + prize toggle (X6)	<code>/performance/admin/contests</code>	contests in engine (cash)
Payout desk (+payroll status I1)	<code>/performance/settlement/payouts</code>	<code>fn_incentive_payout</code> <code>accounting_ap_bill</code>

Configuration (admin)

Screen	Route	Backend	Status
Plans · Rules · Slabs · Targets	<code>/performance/admin/plans</code>	existing plans tabs	☒ ; ☐ rule <code>stacking</code> (additive/ex + <code>milesto</code> columns
Schemes templates (I3)	same, 5th tab	<code>incentive_schemes</code> (unused table)	☐ CRUD + plan
FX policy + audit (I2)	<code>/performance/admin/fx</code>	<code>fx_rates</code> + <code>rate_purpose</code> ; retire static <code>fx.ts</code> for billing	☒ rates; ☐ table; ☐ bil consumers

Screen	Route	Backend	Status
Wallet policy (bands · rules · weights · floor · W4 no-full-burn · W5 stepped · W6 expiry)	<code>/performance/wallet/policy</code>	<code>wallet_multiplier_bands</code> , <code>wallet_topup_rules</code> , <code>performance_score_weights</code>	☒ tables; ☐ W4/W5/
Wallets & top-ups (+strategic, branch pool W2, exceptions W7)	<code>/performance/wallet</code>	<code>fn_size_wallets_for_period</code> , <code>fn_wallet_scope_matches</code>	☒ sizing/sc pool wallet exception r
Period close + July reseed preview (X4)	<code>/performance/wallet/close</code>	<code>fn_period_close_and_reseed</code>	☒ fn; ☐ pr before-com

Offers studio

Screen	Route	Backend	Status
Offers dashboard (O1)	<code>/performance/offers</code>	counts over <code>offers</code> , <code>offer_events</code>	☐ UI
Library + lifecycle	<code>/performance/offers/library</code>	<code>offer_status</code> , history, versions, funding badges	☒ sche ☒ UI actions <code>is_ac</code> for port

Screen	Route	Backend	Status
Create wizard (O2, 5 steps incl. channels)	<code>/performance/offers/new</code>	offers insert as <code>draft</code> ; <code>offer_audience_targets</code>	
Promotion requests (O3, SLA 48h)	<code>/performance/offers/requests</code>	☐ new table <code>promotion_requests(status, sla_at)</code> ; approve → insert draft offer	☐
Corporate calendar (O4)	<code>/performance/offers/calendar</code>	☐ <code>campaign_calendar</code> table	☐
Segments (O5)	<code>/performance/offers/segments</code>	<code>offer_audience_targets</code>	☐ UI
Auto-offer rules (O6)	<code>/performance/offers/automation</code>	extend <code>offers-lifecycle-tick</code> cron (birthday already runs)	
AI Offer Studio (O12)	<code>/performance/offers/ai-studio</code>	edge fn <code>offer-ai-studio</code> , server-side role gate (admin+marcom)	☐ ; out draft of only
Approvals (offers · depth matrix · wallet exceptions)	<code>/performance/approvals</code>	depth matrix: ≤10% instant · 11-20% manager · >20%/floor admin · waiver admin-only (O16 floor)	☐ que + routin Give Discou submit
Analytics (+O10 Influence, Wallet Impact)	<code>/performance/offers/analytics</code>	<code>offer_roi_stats</code> , <code>counselor_offer_stats</code>	☒ core attribut queries

2. Roles (§8) — enforce in nav AND RLS/edge functions

Capability	Admin	MarCom	Branch mgr	Counselor
AI Offer Studio	✓	✓	✗	✗
Promotion requests	review	review	submit	submit
Wallet rules config	✓	✗	✗	✗
Approve deep discount	✓	✗	✓	✗
Calculate / lock run	✓	✗	✓	✗
Period close	✓	✗	✗	✗
Give discount	✓	✗	✓	✓
Offer analytics	✓	✓	branch	✗

Prototype's role switcher demonstrates the four navs; 403 states on run actions for unauthorized roles are already enforced by the edge function — surface them.

3. Recommended build order (maps to prototype, lowest risk first)

1. **Hub shell** — routes, permission-aware nav, global period+branch context bar (X8), Home, Command center, Wiring. *Frontend only*.
2. **Wire what exists** — wallet policy UI over existing tables; period close with reseed preview (X4); funding badges + unlock hard-gate surfaced on Give Discount; "₹X discount reduced your incentive base" on Home (X1).
3. **Gates & queues** — unclassified payments queue blocking lock; approval queue + depth-matrix routing on Give Discount; wallet exception requests (W7).
4. **Event emitters** — (enrolment), (stage_change), (lead_converted) into qualifying events (unblocks telecaller incentives + full X5 timeline); contest prize toggle (X6).
5. **Offers studio** — dashboard, lifecycle actions, wizard, promotion requests, calendar, segments, auto-rules.
6. **Intelligence** — suggestion card (rules-based L0 → AI), AI Offer Studio (L0/L1 only), Influence Revenue + Wallet Impact Revenue queries.

4. Demo numbers used in the prototype (keep consistent in seeds)

Priya: target ₹8,00,000 · achieved ₹5,76,000 (72%) · wallet ₹12,000 potential / ₹8,640

unlocked / ₹4,000 spent · projected cash ₹24,000. Period totals: gross ₹84.2L – discounts ₹3.12L = net ₹81.08L → due ₹4.86L → payouts ₹4.374L (TDS 10%). Slabs 0-60 @3 · 60-100 @5 · 100+ @7.

5. Extension v2 — new screens & roles (added to FutureLink_PerformanceHub_FULL.jsx)

Roles now: Counselor · Branch mgr · Admin/Finance · MarCom · **Telecaller (Ravi · HO) · Director (Vikram · CEO).**

Screen id	Route	Roles	Backend
<code>executive</code>	<code>/performance/executive</code>	Director (default landing, READ-ONLY) + Admin	aggregates over qualifying events, runs, wallets, offer stats; alert feeds = unclassified count, approval queues, run status, request SLA
<code>team</code>	<code>/performance/team</code>	Branch mgr (own branch); Admin/Director via branch filter	branch-scoped achievement RPC + wallets + run preview
<code>givedisc</code>	<code>/performance/give-discount</code>	Counselor · Manager · Admin	<code>fn_apply_offer_discount</code> , allocation unlock trigger, <code>fn_wallet_scope_matches</code> , depth-matrix routing — all live
telecaller home	<code>/performance</code> (role variant)	Telecaller	needs <code>lead_converted</code> emitter + <code>converted_by</code> attribution (§10)

Updated existing: counselor Home cash card splits **projected vs locked** (reads run status — flips when Finance locks); wallet card gains a "Give discount" CTA → `givedisc`. Phase 2B.

Dark mode: light/dark toggle in the global context bar. Prototype swaps a token object at runtime; production should implement the same two palettes as CSS variables / ThemeProvider. Phase 1A.

Director permission rule (add to §2 matrix): Director = firm-wide read on everything; **no** calculate/lock/close/payout/approve actions. Executive-dashboard alert buttons label as "Open in Finance workflow" — navigate for Admin, hand-off toast for Director. Enforce server-side (RLS + edge-function role check), not just nav.

6. Paste-ready Cursor tasks — closing the final design gaps

Paste the block below into Cursor as-is (after it has loaded `FutureLink_PerformanceHub_FULL.jsx` and this map). Tasks 1–5 are build work; Task 6 only creates backlog tickets.

CONTEXT

- Repo: Future Link CRM (React + Supabase / Lovable). Reference design: FutureLink_PerformanceHub_FULL.jsx (28 screens, 6 roles) + CURSOR_IMPLEMENTATION_MAP.md (routes, tables, RPCs, build phases §3/§5).
- Do not invent backend: most RPCs/tables already exist (map §0). Check supabase/migrations/202606* before writing any migration.

TASK 1 – Mobile Give Discount (W8) · phase 2A

- Route /performance/give-discount must work at <640px: single column, wallet header collapses to a 2x2 stat grid, full-width slider with large touch target, sticky bottom submit bar showing amount + wallet debit + depth tag.
- Identical logic to desktop: hard unlock gate (allocation trigger), funding-aware debit via fn_apply_offer_discount (university=0, joint=FL share %), strategic-wallet scope error via fn_wallet_scope_matches, depth-matrix routing (≤10% instant · 11-20% manager · >20%/floor admin · waiver blocked).
- Acceptance: on a 390px viewport, a counselor can apply a 10% discount in ≤4 taps; submit is disabled with a visible red state when debit > unlocked.

TASK 2 – service_offers → offers convergence banner (014) · phase 2C

- On every screen still reading the legacy service_offers table, render a dismissible amber banner: "This screen uses the legacy service_offers system. New promotions live in the Offer Library (Performance Hub). Legacy offers become read-only on <date>."
- Add feature flag legacy_offers_read_only (default false). When true: hide create/edit on legacy screens, keep read.
- Write docs/migrations/service-offers-convergence.md listing each service_offers column → offers/client_offers mapping and which rows need backfill.
- Acceptance: banner visible on legacy routes; flag flips legacy screens to read-only without code changes.

TASK 3 – "No target set" empty state · phase 2B

- /performance (Home): when incentive_targets has no row for (user, period):
 - Achievement card → "No target set for {period} – contact your admin. Earnings still accrue from flat/percent rules; slab and bonus rules need a target."
 - Wallet card → potential shown, unlocked = policy floor behavior, with one line: "Unlock follows achievement; without a target, achievement cannot be computed."
- Same check on /performance/give-discount header.
- Acceptance: delete a target in seed data → both screens show the state, no NaN/0-division anywhere.

TASK 4 – Director read-only, enforced server-side · phase 1B

- Add role 'director' to user_roles handling. RLS: SELECT on all performance/offers/wallet tables; NO insert/update/delete grants.
- Edge functions (incentive-calculate-run, period close, payout generation, approval mutations): reject role=director with 403 {code:"DIRECTOR_READ_ONLY"}.
- Frontend already hides actions; additionally map the 403 to the "Open in Finance workflow" toast on /performance/executive.
- Acceptance: API call to lock a run with a director JWT returns 403; same call as admin succeeds.

TASK 5 – Production theming · phase 1A

- Convert the prototype LIGHT/DARK token objects into CSS variables on :root / [data-theme="dark"]; ThemeProvider toggles the attribute, defaults to prefers-color-scheme, persists in user settings (not localStorage-only).
- Keep exact hex values and token names from the prototype (ink/paper/card/line/text/faint/blue/cash/wallet/offer/violet + *Bg + *Txt + muteBg/barBg/topbar/topbarChip).
- Acceptance: toggling restyles all Hub screens with no FOUC; module accent colors identical in both themes.

TASK 6 – Backlog tickets only (label: deferred-phase-7, DO NOT BUILD)

Create issues: 08 per-person unique codes + QR · 09 fraud guards (velocity, duplicate device, self-referral) · 011 A/B testing · 015 landing pages per offer · bundle builder (offer_groups) · I4 split attribution 50/50 · I7 multi-plan stacking per counselor · I8 real-time earning ticker · dedicated adjustments report/export · omni-channel send composer (replace toast placeholder) · 07 automation journeys · AI auto-send L2+.

Each ticket: one-line scope, blocked-by (if any), reference to Gaps Brief section.
